Patient message
Input safety gateway
Screens each message for red flags, injection and out-of-scope requests before any reasoning.
Evidence and context
Approved, versioned sources, plus confirmed and time-stamped facts about the user.
Orchestrator and model
Plans the reply. The model sits here and nowhere else.
Governed tools
Reads and writes only through permissioned tools, with confirmation, audit and rollback.
Output safety gateway
Checks the draft for diagnosis, prescription and unsupported citations before display.
Reply with citations and a next step
ROUTE
Risk found at any layer goes to a human or to emergency guidance, by fixed rules.
For example: heavy bleeding, chest pain, suicidal thoughts, a dose request.
GOVERNANCE AND MONITORING UNDER EVERY LAYER
safety card · registries · logs · evaluation · release gates · change control
